### Save the Babies.

NFANT MORTALITY is something frightful. We can hardly realize that of all the children born in civilized countries, twenty-two per cent., or nearly one-quarter, die before they reach one year; thirty-seven per cent., or more than one-third, before they are five, and one-half before

they are fifteen ! We do not hesitate to say that a timely use of Castoria would save a majority of these precious lives. Neither do we hesitate to say that many of these infantile deaths are occasioned by the use of narcotic preparations. Drops, tinctures and soothing syrups sold for children's complaints contain more or less opium or morphine. They are, in considerable quantities, deadly poisons. In any quantity, they stupefy retard circulation and lead deadly poisons. In any quantity, they stupefy, retard circulation and lead to congestions, sickness, death. Castoria operates exactly the reverse, but you must see that it bears the signature of Chas. H. Fletcher. Castoria causes the blood to circulate properly, opens the pores of the skin and allays fever.

Additions Make It Comfortable and Desirable Residence for Any Climate.

Extra Thickness, Where Required, Makes It of Supreme Importance-Interior is of the Best Formation That Can Be Devised by Builders.

Mr. William A. Radford will answer uestions and give advice FREE OF COST on all subjects pertaining to the subject of building, for the readers of this paper. On account of his wide experience as Editor, Author and Manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue. Chicago, Iii., and only enclose two-cent stamp for reply.

By WILLIAM A. RADFORD. For the small family of simple tastes, nothing could be more appropriate for a residence than a bungalow built according to the design here shown.

This is a bungalow designed in the true western or southern spirit, but so modified as to make it a substantial and comfortable residence for the severest climates.

The exterior is sided with boards seven-eighths inch thick, left with a rough finish, and stained a soft olive green. This style of siding is very effective in bungalow work, and is probably the cheapest of any of the styles of siding. Shingles are just about as cheap, so far as the material is concerned; but the high labor cost, these days, for applying them, brings the total cost of the job up equal to that of finished clapboarding. The extra thickness of this rough siding is in its favor, also, where warmth and durability are of importance.

The gable ends of this bungalow are finished with cement plaster, mixed with white cement if a lighter

desired, and is applied with a pebble-dash finish. Fourinch strips seven-eighths inch thick, are used to divide the plaster coat into panels, giving an English "halftimber" effect. These strips should be securely nailed to the sheathing boards, through the cement plaster, before the same has hardened. They are put on before the plaster finishing coat is applied. As will be seen from the floor plan,

the interior arrangement of this cozy little bungalow leaves little to be desired. There are five good rooms, besides vestibule, pantry, bathroom, two closets, and the hall.

The living room is 20 by 14 feet, and cal fireplace that is meant for business, in the middle of one end. There are seats built in on each side of the fireplace and under the high windows.

apartment, separated from the living ed me his bills, as if he were giving room by an artistic columned opening. A square bay window with cement sash is a feature of this room.

The kitchen is arranged to save steps. It is not too large, being 11 by 10 feet, and is light and airy.

The sleeping room provision in this design is arranged to give a surprising amount of privacy for a bungalow. Two good-sized bedrooms are provided, each with a clothes closet. The

bathroom opening off the hall, is located between the two bedrooms. The estimated cost of this bungawhich may be either of the natural pine trim, has been placed at \$2,100 gray color of Portland cement, or under favorable conditions of the market for labor and materials.

Samoan Islanders for Twenty Years Have Held Robert Louis Stevenson in Loving Memory.

How many of the lovers of Robert Louis Stevenson-the modern who was an ancient, the ancient who was a modern, the contemporary who became a classic because he translated new things into thoughts for all time -how many of those millions who it has been 20 years since he died? W. Bourke Cockran was talking How many know that 19 years ago the bronze tablet was erected over his tomb in a far-away South Sea isle "Many a poor Irish rebel, had he but for endless generations to read and

wonder at? It was 20 years ago next December assume the uniform of an Austrian of-"Patriots! What is a patriot, after that Stevenson died at Valima, near ficer." all? Isn't a patriot just a man who'd Apia, on the island of Upolu, in the Plain Denier. Since then he has slept in a distant grave, but not in a neglected one. For the natives of that island keep his tomb on the lonely mountainside fragrant with flowers.

> Stevenson went to live in Samoa in man, but he had seen the vanities of the world, and, captivated by the climate, the scenery, and the kindly character of the natives, he at once determined to live out whatever space of life might remain to him in that fortunate island. And there he did live for seven years. Long ere he racity. died he wrote his own epitaph, and that epitaph is engraved on the brass tablet that was put there 19 years

ago. It is carved on lasting bronze, but, like Horace, he raised himself a monument even more enduring than bronze. The natives who keep his grave fragrant will all die, some day, and their descendants will be benevolently assimllated. But all the chilwill pluck perennial flowers from the "But she said a small amount of child's garden of verses for that tomb;
